

Beginning our 11th year!

Dear IJAHP Reader,

We are glad to publish our first issue for 2019. It has been 10 years since we published our very first issue, and this is a reason to say thank you for your support. It is the *IJAHP* community as a whole who make this journal possible. We each play a role from authoring papers to reading and recommending the journal to volunteering to be a reviewer.

This issue has a great variety of AHP/ANP applications, mainly in the public sector, and closes with a thought-provoking discussion of new perspectives to structure complexity. In addition, our special topic articles section includes an article on the use of an intuitionistic fuzzy linguistic AHP method to prioritize investments. Dr. Cengiz Kahraman was guest editor for our special topic section on Fuzzy AHP in the previous issue, but due to logistic considerations this article could not be published then. It is published now for your enjoyment, and constitutes our last article on Fuzzy AHP as a special topic. Enjoy this issue!

Very sincerely,

A handwritten signature in black ink that reads "Enrique Mu". The signature is fluid and cursive, with a long horizontal stroke at the end.

Enrique Mu
IJAHP, Editor-in-Chief
